## Questions

- i) Echo the hostname of the system to a file in the /tmp directory in 5 minutes using the at command. List the scheduled at job. Provide the output.
- ii) Create a cronjob that echoes your first and last name every Sunday at 2pm during the month of March. Provide the details.
- iii) Provide the output of all nice levels for current running processes with the highest nice levels sorted at the top.
- iv) Run the top command in the background. Change the nice level of the backgrounded top process to the lowest priority. Provide the output.
