

# **RHEL LABS**

**Week 05**

*CIT 218*

Chaz Davis

BCTC

Spring 2020

April 11, 2020

## Questions

i) After completing the 11.2. Practice: Create a file in the `/mnt/public` directory named `firstname_lastname`. List the files of the directory. Provide the output.

I logged into Desktop1 and mount the directories. In order to gain access to `/mnt/public` I logged in through ssh as `ldapuser1@localhost` and ran the command `touch Chaz_Davis` and finally, the command `ls -l` to see the output in a list format, of which you can see in the screenshot in Fig. 1a Pg. 1.

ii) After completing the 11.4. Practice: Create a file in the `/shares/docs` directory named `firstname_lastname`. List the files of the directory. Provide the output.

I logged into desktop1 and downloaded and created the map files for autofs. I the logged in as `ldapuser1@localhost` and created the file `Chaz_Davis` and listed the docs directory with the command `ls -l`. You can see the output in Fig. 1 b on Pg. 1.

iii) After completing the 12.2. Practice: Create a file in the `/shares/docs` directory named `firstname_lastname`. List the files of the directory. Provide the output.

This was the same as the last example, I assumed you wanted me to create the file in and list the `~/work` directory. So, that's what I did. The output can be seen in Fig. 1c on Pg. 1.
